

Sustainability Policy

Introduction:

Coen Steel is committed to achieving a high standard of sustainability through the services we provide and the way that we operate as a business.

We recognise both our moral obligation to safeguard the environment and the business benefits of the efficient use of natural resources.

This statement sets out Coen Steel's actions to help ensure that our business activities have a positive environmental impact.

Aim of the policy

We aim to minimise our environmental impact through reducing waste, emissions, water consumption and energy such as electricity and other resources and materials used in our business activities and will try to achieve this by:

- Implementing best practice standards.
- Complying with all current environmental legislation
- Raising awareness of staff, sub-contractors, and others in our supply chain of our policy and encourage them to implement sustainability work practices.
- Considering the impact of our work on the environment and further steps that can be taken to improve our approach to sustainability.

To achieve these aims Coen Steel will:

- Develop sustainable procurement procedures for our supply chain by working with our suppliers on an ongoing basis.
- Encourage where safe to do so, the repair, re-use and re-cycling instead of disposal of surplus materials and minimise waste generation. Where disposal is the only option, to efficiently sort waste and ensure disposal is made responsibly using the correct channels.
- Maximise the efficient use of energy by the installation of Solar Panels to our building, which not only provides energy for ourselves but is put back into the grid.
- Increase where possible the use of renewable resources.
- Recognise and reward sustainable initiatives which help to promote Coen Steel as a sustainable thinking organisation.
- We will monitor and control the use of energy and raw materials to optimise consumption, ensuring we meet responsible sourcing principles. Maintain life cycle analysis of products as required by the market and use of recycled content in our manufacturing processes.
- Work with our hauliers to reduce empty miles & burn less fuel with less carbon emissions into the air.
- Develop & implement a biodiversity action plan to protect & enhance the natural environment.
- Continue to raise awareness with staff, customers and others regarding good practice in how to achieve sustainable methods of working.

This Policy is communicated to everyone working for or on behalf of Coen Steel and will be prominently displayed in our offices and shared through our media channels. This Policy will be reviewed annually to ensure it remains relevant and appropriate to our activities and will be made available to other interested parties on request.
